Appl. No. 10/520,030 Attorney Docket No. 12400-31 Client Reference No. P 16518 US

I. Listing of Claims

CLAIMS:

(Currently Amended) A steering wheel comprising a frame to be 1

connected to a steering shaft, the frame having radially outwardly extending

spokes and a rim, the frame defining a recess to receive an air-bag unit, the

steering wheel being provided with a plurality of mounting elements, each of

the mounting elements being associated with a respective spoke, each of the

mounting elements being connected to the steering wheel and having a

portion that lies over top of an external everlying part of the steering wheel,

each of the mounting elements being adjacent a periphery of the air-bag unit;

the air-bag unit being connected to each of the mounting element elements by

means of a respective resiliently biased connection to enable relative

movement of the air-bag unit with respect to the steering wheel, the periphery

of the air-bag unit defining a substantially predetermined gap with [[the]] a

portion of each of the mounting element elements.

2. (Previously Presented) A steering wheel according to Claim 1

wherein at least one of the resiliently biased connections between the air-bag

unit and one of the mounting elements of the steering wheel includes electric

contacts configured to be moved to touch each other on movement of the air-

bag unit against the bias of the resiliently biased connection to complete a

-2-

horn or hooter circuit

Appl. No. 10/520,030 Attorney Docket No. 12400-31 Client Reference No. P 16518 US

3. A steering wheel according to Claim 1 (Previously Presented)

wherein at least one of the resiliently biased connections comprises a

compressible helical spring.

(Previously Presented) A steering wheel according to Claim 3

wherein the upper part of the spring is connected to an element which is

received within a snap-fit socket provided on a projecting peripheral lip of the

air-bag unit.

5. (Currently Amended) A steering wheel according to Claim 1

wherein at least one of the mounting elements are mounted to the steering

wheel with a degree of freedom of movement, wherein the movement of the

mounting element causing the portion of the mounting element that lies over

top of the external everlying part of the steering wheel to slide relative to the

steering wheel.

6. (Previously Presented) A steering wheel according to Claim 5

wherein there are three of the mounting elements, one of the mounting

elements being mounted to the steering wheel at a predetermined position

without the degree of freedom of movement, and the remaining two of the

mounting elements being mounted to the steering wheel with the degree of

- 3 -

freedom of movement

Appl. No. 10/520,030 Attorney Docket No. 12400-31 Client Reference No. P 16518 US

A steering wheel according to Claim 5 (Currently Amended)

wherein the steering wheel defines mounting platforms and respective

retaining recesses, each of the mounting elements having a horizontal bias to

a respective mounting platform and having depending snap acting elements

receivable within the corresponding recess, at least some of the recesses

having dimensions greater than that of the snap acting elements to provide

the degree of freedom of movement.

8. (Currently Amended) A steering wheel according to Claim 7

wherein each recess of the recesses is provided within [[a]] the respective

platform.

7.

9. A steering wheel according to Claim 7 (Currently Amended)

wherein each recess of the recesses is provided at a position adjacent [[a]]

the respective of the platforms platform.

10. (Currently Amended) A steering wheel according to Claim 7

wherein each of the platforms is located beneath a peripheral lip provided on

the air-bag unit, the portion of the mounting element that lies over top of the

external over-lying part of the steering wheel being in the form of a flange, the

- 4 -

gap being defined between the peripheral lip and the flange.
